Which one of the follo...

1

Correct Answer

Check Answer ▼

Which one of the following statements describes Encapsulation best?

- 1) Class must override all parent methods
- ✓ 2) The class should hide it's private state and behavior and provide a set of business methods for the manipulation of the the object state.
- 3) Class should contain overloaded methods
- 4) None of the above

Choose correct options from fo...

1

Correct Answer

Check Answer ▼

Choose correct options from following while Adding Remote repository helps us to :-

- A] Sync up work with team.
- B] Decreases development speed.
- C] Central clearing house.
- D] Keep a back up.

- 1) A,B,D
- 2) A,B,C
- 3) A,B,C,D
- ✓ 4) A,C,D
- 5) B,C,D

1. Which of the following is the incorrect statement about GIT?

- 1) Only one.git directory per repository
- 2) Superior disk utilization and network performance
- 3) Multiple developers can not checkout
- 4) Data redundancy and replication

2. \_\_\_\_\_ and \_\_\_\_\_ operators combines the result of two component conditions to produce a single result based on them.

- 1) AND
- 2) CONCAT
- 3) JOIN
- 4) OR

3. State True or False :-

Git add command just adds files to staging area and doesn't actually commits.

- 1) TRUE
- 2) FALSE

4. Choose correct options from following while

Adding Remote repository helps us to :-

- A] Sync up work with team.
- B] Decreases development speed.
- C] Central clearing house.
- D] Keep a back up.

- 1) A,B,D
- 2) A,B,C
- 3) A,B,C,D
- 4) A,C,D
- 5) B,C,D

5. Which one of the following statements is true?

- 1) We can not overload a method in same class
- 2) We can not override a method in same class
- 3) Overloaded methods have exactly same method signature.
- 4) None of the above statements is true

6. Select the correct mapping:

- i. CREATE - DDL
- ii. RENAME - DCL
- iii. ROLLBACK - TCL
- iv. REVOKE - DCL
- v. DELETE - DDL
- vi. UPDATE - DML

- 1) i, ii, vi
- 2) i, ii, v, vi
- 3) i, iii, iv, vi
- 4) i, iii, iv

**7. Which is not a valid difference between DELETE and TRUNCATE?**

- 1) DELETE is a DML command  
TRUNCATE is a DDL command
- 2) DELETE requires commit  
TRUNCATE does not require commit
- 3) DELETE can not be rolled back.  
TRUNCATE can be rolled back.
- 4) TRUNCATE is faster than DELETE

**8. Examine the description of the STUDENTS table:**

STD\_ID NUMBER(4)  
COURSE\_ID VARCHAR2(10)  
START\_DATE DATE  
END\_DATE DATE

**Which aggregate functions are valid on the START\_DATE column?**

- 1) MIN
- 2) COUNT
- 3) AVG
- 4) SUM
- 5) MAX

**9. What is staging area or index in GIT?  
select all matching/correct options.**

- 1) An intermediate area to format and review
- 2) Area where merging takes place before pushing to remote
- 3) Area which can act like cache to review
- 4) Area where commits are stored

**10. Database management systems are intended to**

- 1) eliminate data redundancy
- 2) establish relationship among records in different files
- 3) manage file access
- 4) maintain data integrity
- 5) all of the above

**11. Mr. Natawarlal being businessman has three Cars in his house,**

**His personal Car**

His wife's Car  
Company Car

Which of the following is the best way to model this description.

- 1) "Businessman" class is associated with class "Car". "PersonalCar", "WifesCar" and "CompanyCar" are instances of class "Car"
- 2) "Businessman" class is associated with class "Car". "PersonalCar", "WifesCar" and "CompanyCar" are child classes of "Car" class.
- 3) "Businessman" class is associated with "PersonalCar", "WifesCar" and "CompanyCar" classes
- 4) All of the above fail to model it

12. "IS-A" or "IS KIND OF" relationship can be best represented by which one of the following relationships?

- 1) Aggregation
- 2) Composition
- 3) Association
- 4) Inheritance

14. In ORACLE, Which of the following statement is true in case of ORDER BY clause?

- 1) Null values are displayed last in case of Order by Ascending and at the start in case of Descending Order.
- 2) Null values are displayed last in case of Order by Descending and at the start in case of Ascending Order.
- 3) Null values are displayed last in case of Ascending as well as Descending order.
- 4) Null values are ignored while sorting the records.

15. Consider the below table structure

Employees(Employee\_id,Last\_name,job\_id,salary,commission\_pct,Department\_id)  
Departments(department\_id,department\_name)

Which is the correct query to delete all the employees from Employees table who are in a department where the department name contains the string 'Public.'

- 1) DELETE FROM employees  
WHERE department\_name LIKE '%Public%');
- 2) DELETE FROM employees  
WHERE department\_id <>  
(SELECT department\_id  
FROM departments  
WHERE department\_name LIKE "%Public%");
- 3) DELETE FROM employees  
WHERE department\_id =  
(SELECT department\_id  
FROM departments  
WHERE department\_name LIKE '%Public%');

4) DELETE FROM employees,departments  
WHERE employees.department\_id =  
departments.department\_id  
and department\_name LIKE '%Public%'

16. You want to display the titles of books that meet following criteria:

1. Purchased before January 21, 2001
2. Price is less than 500 or greater than 900

You want to sort the results by their date of purchase, starting with the most recently bought book. Which statement should you use?

- 1) SELECT book\_title FROM books WHERE price BETWEEN 500 AND 900 AND purchase\_date < '21-JAN-2001' ORDER BY purchase\_date;
- 2) SELECT book\_title FROM books WHERE price IN (500,900) AND purchase\_date < '21-JAN-2001' ORDER BY purchase\_date ASC;
- 3) SELECT book\_title FROM books WHERE price < 500 OR > 900 AND purchase\_date < '21-JAN-2001' ORDER BY purchase\_date DESC;
- 4) SELECT book\_title FROM books WHERE (price < 500 OR price > 900) AND purchase\_date < '21-JAN-2001' ORDER BY purchase\_date DESC;

17. In UML how is class represented?

- 1) Rounded rectangle with 3 partitions
- 2) Ellipse
- 3) Rectangle with 3 partitions
- 4) Dotted Rectangle with 3 partitions

18. Class "Car" inherits from class "Vehicle". Both the classes have method implementation for start(). Which one of the following OO principles are demonstrated here?

- 1) Method overriding
- 2) Method overloading
- 3) Reification
- 4) None of the above

19. State True or False for following statements:-

- A] git reset permanently removes commits from repository.
- B] git revert is to undo any commit message.
- C] git checkout is to undo the committed changes.

- 1) A] False  
B] False  
C] False
- 2) A] True  
B] True  
C] True

3) A] True

B] True

C] False

4) A] False

B] True

C] True

5) A] False

B] False

C] True

**20. For writing a robust code, which of the following guidelines need to be followed**

1) All base class attributes need to be static

2) Only base class need to have private attributes

3) every attribute of class must be private. For information hiding

4) The methods and attributes of all classes need to be private.

**21. Which one of the following aspect is NOT covered in class model?**

1) Which are abstract classes

2) Which methods are overridden in child class

3) Which class can invoke operation of which other class?

4) When specific operation was invoked by other class

**22. State True or False:- If you want to preserve the complete history of your project and avoid the risk of re-writing public commits, we must use git rebase instead of git merge.**

1) TRUE

2) FALSE

**23. What is the output of below?**

```
select trunc(mod(mod(358, 10), 3), 1) from dual;
```

Note: use truncate if required as per db.

1) 1

2) 8

3) 2

4) 6

**24. In below example, what would be the value of NEXTVAL after 1000 numbers.**

```
CREATE SEQUENCE seq1  
START WITH 1  
INCREMENT BY 1  
MAXVALUE 1000  
NOCYCLE;
```

1) 1

2) 0

3) 1001

4) Call to Nextval will throw the error.

25. Following command is used to:-

git checkout -b  
<sha>

1) Checkout to branch

2) Recover the deleted commit

3) Recover the deleted branch

4) Checkout to temporary deleted branch

26. Column in a table refers to \_\_\_\_\_ in Entity Relationship diagram.

1) Entity

2) Relation

3) Attribute

4) Touple

27. Which of the following is correct command to merge idea branch to master?

1) git merge --all

2) git merge master

3) git merge idea

4) git branch idea --merge

28. A person has many attributes possible like (name, email, mobile number, weight, height, eye color and so on ...). But while considering class Employee (i.e.) Person working for IT company, model can ignore inessential attributes like weight, height, eye color etc. Which one of the following principles is demonstrated here?

1) method overloading

2) Data hiding

3) Abstraction

4) None of the above

29. Match the following :-

A] git status A] Operates on committed history

B] git log B] Operates on staging area and repository

C] git diff --staged C] Inspects working directory and staging area

1) A -> C

B -> A

C -> B

2) A -> A

B -> B

C -> A

**30. Find below the structure of Employees table**

**Employees(Employee\_Id,Emp\_name,Job\_id,Mgrid,Dept\_id,sal)**

On the EMPLOYEES table, EMPLOYEE\_ID is the primary key. MGR\_ID is the ID of managers and refers to the EMPLOYEE\_ID. The JOB\_ID column is a NOT NULL column. Evaluate this DELETE statement:

**DELETE employee\_id, salary, job\_id**

**FROM employees**

**WHERE dept\_id = 90;**

**Why does the DELETE statement fail when you execute it?**

1) There is no row with dept\_id 90 in the EMPLOYEES table.

2) User cannot delete the JOB\_ID column because it is a NOT NULL column.

3) User cannot specify column names in the DELETE clause of the DELETE statement

4) User cannot delete the EMPLOYEE\_ID column because it is the primary key of the table.

**31. Which statement describes a commit in Git?**

1) The changes to the project sources since inception

2) The changes to the project sources since the previous commit

3) A promise to make a change by a specified date

4) A deadline for the merging of a Git branch

**32. 'AS' clause is used in SQL for**

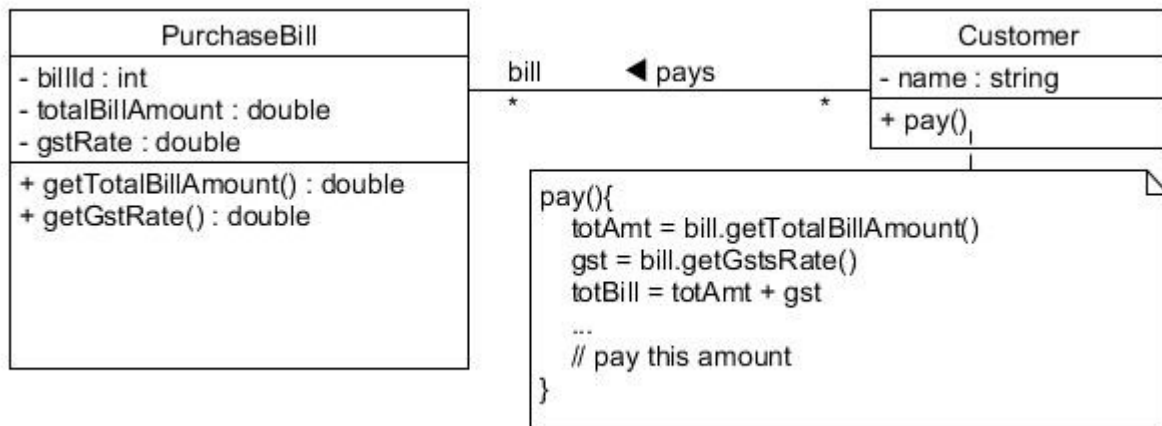

1) Selection of data

2) Joining tables

3) assigning alternative name for a column

4) Projection of data

33. In this class model which one of the following OO principles is clearly violated?

- 1) Abstraction
- 2) Data hiding
- 3) Encapsulation
- 4) Economy of expression

34. SELECT ROUND(5.693893) from dual;

- 1) Returns 5
- 2) Returns 0
- 3) Returns 6
- 4) Error thrown : Missing Where condition
- 5) Error thrown : Missing FROM clause

35. A primary key is combined with a foreign key creates

- 1) Parent-Child relationship between the tables that connect them.
- 2) Many to many relationship between the tables that connect them.
- 3) Network model between the tables that connect them.
- 4) None of these

36. Choose the correct sequence of command from following to track a file.  
 (Assume file is being tracked for first time)

- 1) git init  
 git -am <message>  
 git commit <message>
- 2) git init  
 git add <filename.extension>  
 git commit -m <message>

3) git init  
git commit -m <message>  
git add <filename.extension>

4) git init  
git commit -am <message>

**37. \_\_ is not a Transaction control language statement**

- 1) Revoke
- 2) Rollback
- 3) Commit
- 4) Savepoint

**38. What are valid constraint types? (Choose Multiples)**

- 1) NOT NULL
- 2) UNIQUE
- 3) CANDIDATE KEY
- 4) PRIMARY KEY
- 5) CHECK

**39. Which command will automatically commit a new change to your local repository that does the opposite changes of a previous commit, effectively eliminating a previous commit change from repository?**

- 1) undo
- 2) roll back
- 3) reverse
- 4) revert

**40. Which of the following activities represent Abstraction in Object Orientation?**

- 1) Identifying correct abstract class
- 2) Creating class with all abstract methods
- 3) Ignoring inessential details
- 4) Convert concrete class in to pure abstract class

**41. Which command is used to check last 5 commits by a particular author?**

- 1) git log n 5 author=<"pattern">
- 2) git log -n 5 -author=<"pattern">
- 3) git log --n 5 --author=<"pattern">
- 4) git log -n 5 --author=<"pattern">

**42. Which one of the following relationship is mandatory for method overloading**

- 1) Inheritance
- 2) Composition
- 3) Aggregation
- 4) None of the above

43. \_\_\_\_\_ clause filters the Summarized data.

- 1) GROUP BY
- 2) FILTER
- 3) WHERE
- 4) HAVING
- 5) ORDER BY

44. For protecting the client classes from changes in attributes and getting control over state of the object, which one of the following strategies helps best?

- 1) Make all attributes public
- 2) Make all attributes private
- 3) Make all attributes protected
- 4) Make all attributes default scope

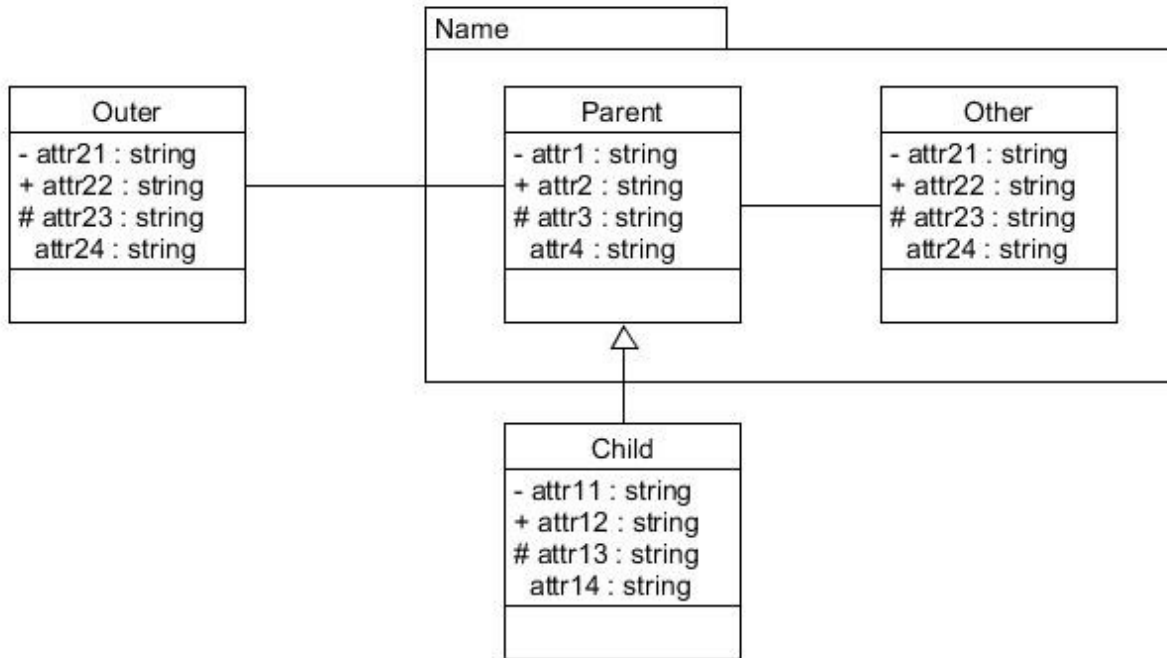

45. Which type of variables are associated with class and not the object

- 1) Private
- 2) Protected
- 3) Public
- 4) Static

46. Employee's joining date is saved in Emp table's JoiningDate column. Write a query to find name(s) of the seniormost employee in the company.

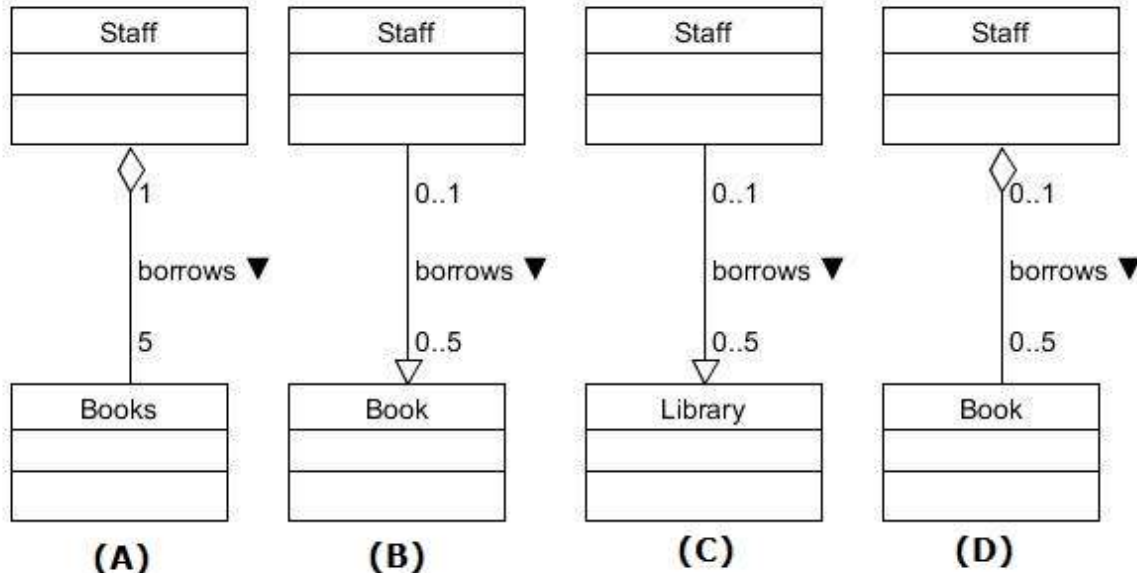

- 1) SELECT Name FROM Emp WHERE JoiningDate = (SELECT JoiningDate FROM Emp)
- 2) SELECT Name FROM Emp WHERE JoiningDate = (SELECT MAX(JoiningDate ) FROM Emp)
- 3) SELECT Name FROM Emp WHERE JoiningDate = (SELECT MIN(JoiningDate ) FROM Emp)
- 4) SELECT Name FROM Emp GROUP BY JoiningDate, Name HAVING JoiningDate=(SELECT MAX(JoiningDate ) FROM Emp)
- 5) SELECT Name FROM Emp GROUP BY JoiningDate, Name WHERE JoiningDate = (SELECT MIN(JoiningDate ) FROM Emp)

47. In a given class model, which one of the following statement is true?

- 1) Parent can access attr13
- 2) Outer can access attr4
- 3) Child can access attr1
- 4) None of the above

48. A college staff can borrow up to 5 books from library, which of the following models represent the case best?

- 1) A
- 2) B
- 3) C
- 4) D

49. User A would like to insert a row into the EMPLOYEE table that has three columns: EMPID, LASTNAME, and SALARY. The user would like to enter data for EMPID 59694 and LASTNAME Harris, but no salary. Which statement would work?

- 1) insert into EMPLOYEE values (59694,'HARRIS', NULL);
- 2) insert into EMPLOYEE values (59694,'HARRIS');
- 3) insert into EMPLOYEE(EMPID, LASTNAME, SALARY) values (59694,'HARRIS');
- 4) insert into EMPLOYEE(select 59694, 'HARRIS' from dual);

50. Select the essential benefits given by Branching. (Choose most correct 2 options)

- 1) Helps automate test executions
- 2) Helps merge changes in teams and resolve conflicts
- 3) Helps work and push changes without impacting the teams involved
- 4) Ensure adherence to compliance regulations

Identify the tasks that can be performed to manage conflicts in Git. (Choose most correct 2 options)

- 1) Deleting the identified conflicting resources

- 2) Identifying conflicting resources using git status
- 3) Creating copies of the identified conflicting resources
- 4) Editing the identified conflicting resources

## PROBLEMS

## POINTS ANSWERED CORRECTLY

Which one of the following statements describes "Encapsulation"?

- 1) All the attributes and methods of every class need to be private.
- 2) All the attributes and operations of every class need to be public
- ☒ 3) All the data for an application should be in one class and all the operations for application should be collected in another class. In general class should either contain attributes or operations but not both.
- 4) The methods and the data (attributes) on which they operate needs to be kept together in one class.

Employee table contains the be...

1

Correct Answer

Check Answer ?

Employee table contains the below data

Employee\_id salary department\_id

```
-----
1      10000      10
2      20000      20
3      35000      null
```

User executes the below query

```
select Employee_id, salary, department_id,
NVL2(department_id, salary+1000, salary+2000) "Updated salary" from
Employee;
```

What will be the value for "Updated salary" column for Employee id 3.

- 1) 36000
- 2) 35000
- ☒ 3) 37000
- 4) 21000

## PROBLEMS

## POINTS ANSWERED CORRECTLY

If we are modelling classes Vehicle, Car [rtoNumber] and Scooter[rtoNumber]. Which of the following is an appropriate way to model the relationships between them?

- 1) All these three classes are independent and have no relation with each other
- 2) Vehicle, Scooter and Car have cyclic composition with each other
- 3) Class Vehicle is a base class with rtoNum as attribute and class car and Scooter are derived classes.

☐ 4) RTONumber is base class and Vehicle, Car, Scooter are derived classes

Find below the structure of Em...

0

Wrong Answer

Check Answer

Find below the structure of Employees table

Employees(Employee\_Id,Emp\_name,Job\_id,Mgrid,Dept\_id,sal)

On the EMPLOYEES table, EMPLOYEE\_ID is the primary key. MGR\_ID is the ID of managers and refers to the EMPLOYEE\_ID. The JOB\_ID column is a NOT NULL column. Evaluate this DELETE statement:

```
DELETE employee_id, salary, job_id
FROM employees
WHERE dept_id = 90;
```

Why does the DELETE statement fail when you execute it?

- 1) There is no row with dept\_id 90 in the EMPLOYEES table.
- 2) User cannot delete the JOB\_ID column because it is a NOT NULL column.
- 3) User cannot specify column names in the DELETE clause of the DELETE statement

☐ 4) User cannot delete the EMPLOYEE\_ID column because it is the primary key of the table.

Wrong Answer

Check Answer ▼

## PROBLEMS

## POINTS ANSWERED CORRECTLY

Find below the structure of Employees table  
Employees(Employee\_Id,Emp\_name,Job\_id,Mgrid,Dept\_id,sal)

On the EMPLOYEES table, EMPLOYEE\_ID is the primary key. MGR\_ID is the ID of managers and refers to the EMPLOYEE\_ID. The JOB\_ID column is a NOT NULL column. Evaluate this DELETE statement:

```
DELETE employee_id, salary, job_id  
FROM employees  
WHERE dept_id = 90;
```

Why does the DELETE statement fail when you execute it?

- 1) There is no row with dept\_id 90 in the EMPLOYEES table.
- 2) User cannot delete the JOB\_ID column because it is a NOT NULL column.
- 3) User cannot specify column names in the DELETE clause of the DELETE statement
- ✗ 4) User cannot delete the EMPLOYEE\_ID column because it is the primary key of the table.

Correct Answer

Check Answer ▼

A primary key is combined with a foreign key creates

- ✓ 1) Parent-Child relationship between the tables that connect them.
- 2) Many to many relationship between the tables that connect them.
- 3) Network model between the tables that connect them.
- 4) None of these

Find below the structure of Em...

0

Wrong Answer

Check Answer ▼

## PROBLEMS

## POINTS ANSWERED CORRECTLY

Find below the structure of Employees table  
Employees(Employee\_Id,Emp\_name,Job\_id,Mgrid,Dept\_id,sal)

On the EMPLOYEES table, EMPLOYEE\_ID is the primary key. MGR\_ID is the ID of managers and refers to the EMPLOYEE\_ID. The JOB\_ID column is a NOT NULL column. Evaluate this DELETE statement:

```
DELETE employee_id, salary, job_id  
FROM employees  
WHERE dept_id = 90;
```

Why does the DELETE statement fail when you execute it?

- 1) There is no row with dept\_id 90 in the EMPLOYEES table.
- 2) User cannot delete the JOB\_ID column because it is a NOT NULL column.
- 3) User cannot specify column names in the DELETE clause of the DELETE statement
- ✗ 4) User cannot delete the EMPLOYEE\_ID column because it is the primary key of the table.

Wrong Answer

Check Answer ▼

The EMP table has these columns:

ENAME VARCHAR2(35)

SALARY NUMBER(8,2)

HIRE\_DATE DATE

Management wants a list of names of employees who are hired in 2011 or 2012 and whose salary in the range of 60000 to 100000. Which SQL statement displays the required results?

- 1) SELECT ENAME  
FROM EMP  
WHERE to\_char(HIRE\_DATE,'YYYY') like '2011' OR '2012'  
AND SALARY BETWEEN (60000,100000);
- 2) SELECT ENAME  
FROM EMP  
WHERE YYYY(HIRE\_DATE) in ('2011','2012')  
AND SALARY IN 60000 and 100000;
- 3) SELECT ENAME  
FROM EMP  
WHERE to\_char(HIRE\_DATE,'YYYY') in ('2011','2012')  
AND SALARY BETWEEN 60000 and 100000;
- 4) SELECT ENAME  
FROM EMP  
WHERE to\_date(HIRE\_DATE,'YYYY') in ('2011','2012')  
AND SALARY BETWEEN 60000 and 100000;

Find below the structure of Em...

1

Correct Answer

Check Answer ▼

Find below the structure of Employees table  
Employees(Employee\_Id,Emp\_name,Job\_id,Mgrid,Dept\_id,sal)

On the EMPLOYEES table, EMPLOYEE\_ID is the primary key. MGR\_ID is the ID of managers and refers to the EMPLOYEE\_ID. The JOB\_ID column is a NOT NULL column. Evaluate this DELETE statement:

```
DELETE employee_id, salary, job_id
FROM employees
WHERE dept_id = 90;
```

Why does the DELETE statement fail when you execute it?

- 1) There is no row with dept\_id 90 in the EMPLOYEES table.
- 2) User cannot delete the JOB\_ID column because it is a NOT NULL column.
- ✓ 3) User cannot specify column names in the DELETE clause of the DELETE statement
- 4) User cannot delete the EMPLOYEE\_ID column because it is the primary key of the table.

Find below the structure of Em...

1

Correct Answer

Check Answer ▼

Find below the structure of Employees table

Employees(Employee\_Id,Emp\_name,Job\_id,Mgrid,Dept\_id,sal)

On the EMPLOYEES table, EMPLOYEE\_ID is the primary key. MGR\_ID is the ID of managers and refers to the EMPLOYEE\_ID. The JOB\_ID column is a NOT NULL column. Evaluate this DELETE statement:

```
DELETE employee_id, salary, job_id
FROM employees
WHERE dept_id = 90;
```

Why does the DELETE statement fail when you execute it?

- 1) There is no row with dept\_id 90 in the EMPLOYEES table.
- 2) User cannot delete the JOB\_ID column because it is a NOT NULL column.
- ✓ 3) User cannot specify column names in the DELETE clause of the DELETE statement
- 4) User cannot delete the EMPLOYEE\_ID column because it is the primary key of the table.

The EMP table has thes...

1

Correct Answer

Check Answer ▼

The EMP table has these columns:

ENAME VARCHAR2(35)

SALARY NUMBER(8,2)

HIRE\_DATE DATE

Management wants a list of names of employees who are hired in 2011 or 2012 and whose salary in the range of 60000 to 100000. Which SQL statement displays the required results?

1) SELECT ENAME

FROM EMP

WHERE to\_char(HIRE\_DATE,'YYYY') like '2011' OR '2012'

AND SALARY BETWEEN (60000,100000);

2) SELECT ENAME

FROM EMP

WHERE YYYY(HIRE\_DATE) in ('2011','2012')

AND SALARY IN 60000 and 100000;

3) SELECT ENAME

FROM EMP

WHERE to\_char(HIRE\_DATE,'YYYY') in ('2011','2012')

AND SALARY BETWEEN 60000 and 100000;

4) SELECT ENAME

FROM EMP

WHERE to\_date(HIRE\_DATE,'YYYY') in ('2011','2012')

AND SALARY BETWEEN 60000 and 100000;

- 3) Class should contain overloaded methods
- ✗ 4) None of the above

Find below the structure of Em...

0

Wrong Answer

Check Answer ✓

## PROBLEMS

## POINTS ANSWERED CORRECTLY

Find below the structure of Employees table  
Employees(Employee\_Id,Emp\_name,Job\_id,Mgrid,Dept\_id,sal)

On the EMPLOYEES table, EMPLOYEE\_ID is the primary key. MGR\_ID is the ID of managers and refers to the EMPLOYEE\_ID. The JOB\_ID column is a NOT NULL column. Evaluate this DELETE statement:

```
DELETE employee_id, salary, job_id  
FROM employees  
WHERE dept_id = 90;
```

Why does the DELETE statement fail when you execute it?

- ✗ 1) There is no row with dept\_id 90 in the EMPLOYEES table.
- 2) User cannot delete the JOB\_ID column because it is a NOT NULL column.
- ✓ 3) User cannot specify column names in the DELETE clause of the DELETE statement
- 4) User cannot delete the EMPLOYEE\_ID column because it is the primary key of the table.
